

Assessment Test: Software Tester (QA)

Duration: 01:15 Hrs	
Full Name:	Sagar Saini
Email ID:	sagarsaini6943@gmail.com
Contact Number:	9027419960

Digitize Your Business

You are testing a **Task Management Application** with the following features: ● User **Registration & Login**

- Logged-in users can:
 - Create a task
 - View task list
 - Edit a task
 - Delete a task
- Tasks are stored in a database and displayed in a list

Assume the application is **close to production release** and has **no existing test documentation**.

Test Case Design

Write **test scenarios** and **test cases** for:

- Registration
- Login
- Task CRUD operations
- Input validation & error handling

Include **positive, negative, and edge cases**.

Bug Identification

List **8–10 potential bugs or risk areas** without executing the application. For each bug, mention:

- Bug description
- Severity (Critical / Major / Minor)
- Reason/Impact

Note

- You are **not expected to complete everything perfectly**.
- We evaluate **how you think, structure, and explain**, not just what you write.

① Test Case Design

① Registration

• Valid- Registration

User entered valid registration details & submit.
Expected - Account should be created successfully.

• Empty Fields

User leave all required fields empty.

Expected - Required-field validation should displayed.

• Invalid email

User enter an invalid email format & submit.
Expected - Email validation message should displayed.

• Existing email

User register using an already registered email.
Expected - Registration should be rejected with an appropriate message.

• Invalid Password

User enters a password that doesn't qualify the defined password rules.

⑥ Login

• Valid Credentials

User enters valid email & password & click login.

Expected - User should be logged in.

• Wrong password

Enter valid email with incorrect password

Expected - Login should fail & an appropriate wrong password message displayed

• Unregistered email

User entered an email that is not registered

Expected - Login should fail

• Empty fields

User leaves email & password empty & click login

Expected - Required-field validation should be displayed.

• Access without login

If user try to access the test functionality without login in.

Expected - User should not be allowed to access protected functionality

③ Create

- Create Valid task
Task should be created & displayed in the task list.
- Create task with empty required field
Validation message should be displayed & task should not be created
- Create Multiple tasks
All tasks should be created & displayed correctly without duplicates.

④ View

- View Task list
Login & open task list
Expected - User's tasks should be displayed correctly.
- View list when no tasks exist
Appropriate empty-state message should be displayed
- Refresh after creating a task
Created task should remain after refresh, confirming database persistence

⑤ Edit

- Edit existing task
Task should be updated & new

information should appear in the list.

- Edit task with invalid/empty data
Validation should prevent an invalid update

⑤ Delete

- Delete existing task
Selected task should be removed from the list.
- Delete one task among multiple tasks
Only the selected task should be deleted; other tasks should remain unchanged
- Refresh after deletion
Deleted task should not reappear after refresh.

② Test Validation & Error handling

- Required field validation
Empty required fields should show clear validation message.
- Invalid input format
Invalid input should be rejected with an appropriate message.

list.

- Maximum input length
Input beyond the defined limit should be rejected / handled properly without crashing.
- Special characters
Special characters should be handled safely without breaking the application.
- Server / database failure
User should receive a meaningful error & the application should remain stable.

③ Potential Bugs

- ① • Description: Unauthenticated user can access task functionality.
• Severity: Critical
• Impact: Unauthorized users may access protected functionality / data.
- ② • Description: User can view another user's tasks.
• Severity: Critical
• Impact: Private user data could be exposed.
- ③ • Description: Task appears created but is not saved in DB.
• Severity: Major
• Impact: User may lose the task after refresh.

- ④ Description: Multiple clicks create duplicate tasks
Severity: Major
Impact: Duplicate records can affect data accuracy.
- ⑤ Description: Editing one task updates another task
Severity: Major
Impact: Incorrect task data may be modified.
- ⑥ Description: Invalid or very long input causes app failure
Severity: Major
Impact: Can affect app stability.
- ⑦ Description: Server/DB errors are not handled properly.
Severity: Major
Impact: App may crash or show incorrect status to the user.
- ⑧ Description: Deleted task reappears after refresh.
Severity: Major
Impact: Indicates DB deletion/persistence issue.
